HAY

SURFACE BY HAY

Surface by HAY is a Panama weave, where all eighteen colour compositions consist of three or four yarns in different colours. From a distance, each composition appears as a single colour, but up close, it is revealed to be a composite of several colours, for example red, bordeaux, blue and a delicate shade of yellow. This complexity of colour allows for a wide range of combinations, since each composition can be drawn in several different directions, depending on the context.

The palette ranges from a beautiful neutral scale, including both a cold grey and a warm camel, to a more colourful scale that deftly combines blue with yellow, purple with green, and red with green.

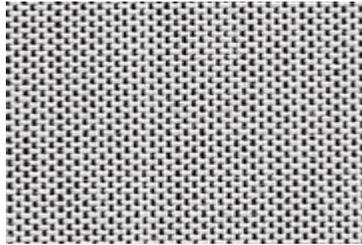

The textile was created in a collaboration between HAY and Kvadrat.
